

# Vincent Michel

---

Software engineer, Python enthusiast and Free Software maintainer

---

## Education

- 2008 - 2012**      **Computer engineering** – Institut National des Sciences Appliquées – Rennes (France)  
*Engineer's degree (master/bachelor equivalent)*
- 2012 - 2013**      **Computer Science** – Rochester Institute of Technology – NY (USA)  
*Exchange program during 2 quarters*

## Professional Experience

- 2014 - 2017**      **Software engineer at MAX-IV Synchrotron** – Lund (Sweden)
- 2017 - 2019**      **Software engineer at European Synchrotron Radiation Facility** – Grenoble (France)  
Control system software for particle accelerators:
- **Python** libraries for many kinds of hardware
  - User interfaces (**PyQt** and command line)
- Software production methods and iterative development:
- Direct interaction with machine operators and scientists
  - Unit testing (**pytest**) and development of **test utilities**
  - Automated packaging and deployment with **Conda**, **Docker** and **Ansible**
- Open-source **Tango** community:
- Bug reports and forum support for new comers
  - Maintaining of the **PyTango** library and other **generic tools**
- 2019 - 2025**      **Software engineer at SCILLE** – Remote work (France)  
Core developer for **Parsec**, a collaborative file-sharing application with end-to-end encryption
- **Python** backend developement for the parsec server using **Starlette** and **FastAPI**
  - **Rust** development of a certificate-based trust chain, using **cryptographic primitives**
  - Implementation of a dedicated file system using **FUSE** and **WinFSP**
  - All contributions publicly available in the **project repository**

## Programming Projects

### Asynchronous programming

- Maintaining two asyncio-based libraries: **aiconsole** and **aiostream**

- **Pull request** to add *run\_coroutine\_threadsafe*, merged in **cpython**

## Terminal programming

- **gambaterm**, a terminal frontend for the gambatte Game Boy Color emulator
- **famiterm**, a simple NES emulator running in the terminal

## Low-level programming

- **arm-linux-from-scratch**, declaring the **ARM Thumb** instruction set in **customasm**
- **eater6502-uart-edition**, writing programs for a 6502 computer in assembly
